

Our Goal:

A Truly Secure Election System

Paper Ballots

Voter-marked paper ballots that are scanned leverage technology to quickly count votes and preserve ability to check that votes were counted as cast.

No Internet Voting

No internet voting unless and until technology emerges that can ensure a “secure network”.

Ballot Audits

Manual post-election ballot audits required for all federal elections, to confirm or correct the outcome before certification.

Secure Pipeline

Secure the voting pipeline from registration, to administration, to equipment, to databases.
